

```
<!-- example on
```

```
loosely typed
```

```
-----
```

Java script did not provide any data types for declaring variables and a variable in javascript can store any type of value. Hence java script is loosely typed programme.

```
dynamic typed
```

```
-----
```

We can use a variable directly without declaring it in javascript, it's called dynamic programming.

```
-->
```

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
<meta charset="UTF-8">
```

```
<title>JS</title>
```

```
</head>
```

```
<body>
```

```
<h3>demo on variables</h3>
```

```
<script>
```

```
//loosely typed
```

```
var a=100; //using like as interger
```

```
document.write(a,`<br>`);
```

```
a=true; //using like as boolean
```

```
document.write(a,`<br>`);
```

```
a="apples"; //using like as string

document.write(a,`<br>`);

//dynamically typed

x=123;

y="apples12";

document.write(x,`<br>`);

document.write(y,`<br>`);

</script>

</body>

</html>
```
