```html
<!-- example on JS

        JS => lib => coll of keywords, operators, functions, classes,
objects

            write() ==> used to print data(text/html) on webpage without
line break

                                        Syn:- document.write(val1, val2, val3,
...);

                                            document.write(val1 +
val2 + val3 + ...);

            writeln() ==> used to print data(text/html) on webpage with
line break

                                        Syn:- document.writeln(val1, val2, val3,
...);

                                            document.writeln(val1 +
val2 + val3 + ...);

            log() ==> used to print data in console

                                console used to print error msg & to
debug js

                                press F12 key

                                Syn:- console.log(data);

-->
